

Расчет числа публикаций и цитирования по базе данных SCOPUS

Адрес для доступа: <http://www.scopus.com/>

Работа возможна с любого компьютера университета подключенного к сети Интернет или через сервис удаленного доступа EZproxy (запрос на получение доступа необходимо отправить на адрес e-res@ustu.ru, указав ФИО, институт/департамент/кафедру и должность).

1. Ищем статьи автора.

Переходим на вкладку Search, подвкладка Author search. Рекомендуется указывать только первый инициал и ограничивать результаты поиска строкой «ural» в месте работы (Affiliation).

The screenshot shows the Scopus search interface. At the top, there are logos for SciVerse and Scopus, and navigation links for Hub, ScienceDirect, Scopus, and Applications. Below that is a dark blue navigation bar with links for Search, Sources, Analytics, Alerts, My list, and Settings. The main content area has four tabs: Document search, Author search (selected), Affiliation search, and Advanced search. The Author search form is highlighted with a red border and contains the following fields: 'Author' (Last Name: Morzerin, Initials or First Name: Y, Affiliation: ural). A 'Search' button is also highlighted with a red box. Below the search form, there is a 'Limit to:' section with 'Subject Areas' and four checkboxes: Life Sciences, Physical Sciences, Health Sciences, and Social Sciences & Humanities. A second 'Search' button is located at the bottom right of the form.

Переходим по ссылке с числом документов в столбце Documents. Если у автора несколько профилей то необходимо отметить их в первом столбце и выбрать ссылку «Show documents».

Make Author Selection

Author Last Name <input type="text" value="Morzherin"/> E.g., smith	Initials or First Name <input type="text" value="Y"/> E.g., J.I.	<input type="checkbox"/> Show exact matches only
Affiliation <input type="text" value="lural"/> E.g., university of toronto		
<input type="button" value="Search"/>		

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)
